

Language Matters:

- Try to use 'person first' language. They are a person **with or living with** a mental illness
- Words Matter! Avoid using words like "They're crazy" or "what a psycho." It's not fair to describe someone by their illness.

Mental Health Information

Be a Stigma Buster:

- Stigmas create negative attitudes and beliefs toward people who have a mental health condition. This can create fear and misunderstanding
- Stigma about mental health conditions is one of their biggest reasons people do not seek help or tell anyone.
- You never know what someone is going through, reach out, be a good listener, encourage help and support.

Provided by the Partnership Program

Stigma busting information designed to promote treatment & recovery from schizophrenia and related mental illnesses.

Mental Wellness Tools

- Anything that makes you feel better – nature, hobbies, pets
- Medication – helps with moderate to severe mental illness
- Therapy – if you live with a mental illness, having mental health issues, or even if you don't, therapy is a safe place to talk.
- Supports – trusted family, friends, teacher, peer support worker to help you in good times and bad
- Abstain from substance use – alcohol and drugs can cause backwards steps to good mental wellness.
- Use good social media practices
- The basics – sleep, eating well, exercise and a good routine.

Mental Health Resources

- Call the Schizophrenia Society Peer Support Worker at: **1-877-584-2620**.

- **Centralized Intake for Mental Health and Addictions:**
Regina: 306-766-7800
Saskatoon: 306-655-7777

What is Schizophrenia?

- Schizophrenia is a **mental illness that affects how a person thinks, feels, and behaves**. People with schizophrenia may seem like they have lost touch with reality, which causes significant distress for the individual, their family members, and friends.

What is Psychosis?

- Psychosis is described as disruptions to a person's thoughts and perceptions that make it difficult for them to realize what is real and what isn't.

What is Depression?

- Depression is used to describe a long period when a person feels sad to the point of feeling worthless, hopeless and/or helpless.

What is an Anxiety Disorder?

- Anxiety disorders are a group of related conditions, each having unique symptoms. Those suffering from anxiety disorders all experience persistent, excessive fear or worry in situations that are not threatening.

What is Bipolar?

- Bipolar disorder is a mental illness that causes dramatic shifts in a person's mood, energy and ability to think clearly. People with bipolar experience high and low moods—known as mania and depression—which differ from the typical ups-and-downs most people experience.
